

Real Estate Listing Portal – Skyline Properties

☐ Presented by: **Bhumika
Dandare
USN:CM25012
Section: I**

❑ Introduction

❖ This project is a **Real Estate Listing Portal**
It shows different **property listings**

➤ Users can:

- View properties
- Apply filters (Price, BHK)
- See detailed information

❑ Objectives

- ❑ Design webpage using **HTML5 structure**
- ❑ Create attractive and user-friendly layout
- ❑ Implement:
 - ❑ Property cards
 - ❑ Filter sidebar
 - ❑ Detailed view

❑ HTML Structure Used

❖ Semantic HTML5 tags:

❑ <header>

❑ <nav>

❑ <section>

❑ <aside>

❑ <footer>

- Proper nesting of elements
- Clean and organized layout

□ Conclusion

- ▮ Successfully created real estate webpage
- ▮ Learned HTML structure and design
- ▮ Improved layout and user experience skills

LEV 2 →

❏ Introduction

❖ This project is a **Real Estate Listing Portal**
It shows different **property listings**

- Skyline Properties is a real estate listing web page
- It helps users to view different properties easily
- The website displays details like price, BHK, and features
- It is designed using HTML5 and CSS
- The main focus is on clean design and user-friendly interface

❑ Objectives

- ❑ To design a real estate web page using HTML5 and CSS
- ❑ To create a structured layout using semantic HTML tags
- ❑ To display property listings in an organized and attractive format
- ❑ To apply CSS for styling, colors, and layout design
- ❑ To improve user experience with a simple and user-friendly interface
- ❑ To understand the basics of web page development

❑ Technologies Used:

- **HTML5**

- ✓ **For structuring the webpage**

- **CSS**

- ✓ **For designing and styling**

- **Internal CSS**

- ✓ **Used inside `<style>` tag**

❑ HTML Tags Used:

- ❖ **<nav>**
 - **Navigation menu**
- ❖ **<main>**
 - **Main content area**
- ❖ **<section>**
 - **Grouping of cards**
- ❖ **<article>**
 - **Each property card**
- ❖ ****
 - **To display property images**
- ❖ **<header>**
 - **Website title section**
- ❖ **<p>**
 - **To show details like price**
- ❖ **<details> & <summary>**
 - **Show/Hide extra info**
- ❖ **<footer>**
 - **Bottom section**

□ CSS Properties Used:

 **background**
For colors & gradients

 **display: grid**
For layout

 **padding & margin**
For spacing

 **border -radius**
Rounded corners

 **box-shadow**
Shadow effect

 **transform**
Hover animation

❏ Introduction

❖ This project is a **Real Estate Listing Portal**
It shows different **property listings**

- Skyline Properties is a real estate listing web page
- It helps users to view different properties easily
- The website displays details like price, BHK, and features
- It is designed using Advanced HTML tag and CSS and Bootstrap
- The main focus is on clean design and user-friendly interface

❑ Objectives

- ❑ **To design a real estate web page using Advanced HTML**
- ❑ **To create a structured layout using semantic HTML tags**
- ❑ **To display property listings in an organized and attractive format**
- ❑ **To apply CSS for styling, colors, and layout design**
- ❑ **To improve user experience with a simple and user-friendly interface**
- ❑ **To understand the basics of web page development**

❑ Technologies Used:

- **Advanced HTML**
 - ✓ **Outstanding Semantic HTML Structure**
- **CSS**
 - ✓ **For designing and styling**
- **Internal CSS**
 - ✓ **Used inside <style> tag**
- **Bootstrap**
 - ✓ **A front-end framework for building responsive and attractive websites quickly.**

❑ Advanced HTML

- ❖ `<section>` –
 - ✓ layout structure
- ❖ `<article>` –
 - ✓ each property card
- ❖ `<figure>` & `<figcaption>`
 - ✓ images + captions
- ❖ `<details>` & `<summary>`
 - ✓ extra info
- ❖ `<progress>`
 - ✓ visual element

❑ CSS Properties Used:

- ❖ background
- ❑ For colors & gradients
- ❖ display: grid
- ❑ For layout
- ❖ padding & margin
- ❑ For spacing
- ❖ border-radius
- ❑ Rounded corners
- ❖ box-shadow
- ❑ Shadow effect
- ❖ transform
- ❑ Hover animation

□ Bootstrap

- Front-end framework for designing websites
- Helps create **responsive layouts**
- Uses **pre-designed CSS, components, and grid system**
- Saves time and reduces coding effort
- Improves overall **UI (User Interface)**
